

# BHT-900 Terminal for stocktaking and other applications

## A versatile barcode scanner and data capture terminal

The BHT-900 is used in conjunction with Fidelity's range of back office EPoS software and features a large and clear display with an illuminated screen which is easy to read even in poor conditions. Robust buttons are made of wear resistant silicone rubber.

### STOCK TAKING

The PLU file is downloaded onto the terminal. The finished stock take is then uploaded back to the PC to give instant stock discrepancy reports.

### DELIVERIES

The quantity of each delivered product is entered into the terminal and then downloaded back to the PC.

### ORDERS

Products to be ordered are scanned into the terminal and the quantity is entered. The order is then downloaded back to the PC.

### RETURNS

Products for return to a supplier can be scanned into the terminal and downloaded back to the PC.

### WASTAGE

Products damaged can be scanned into the terminal and downloaded back to the PC.

### TRANSFERS

Products to be transferred to other sites are scanned into the terminal and downloaded back to the PC.

### ADDING PRODUCTS

If a product is not found, it can be added by entering its details on the terminal and then downloaded back to the PC.

### PRICE CHECKING

In price checking mode, the handy terminal quickly compares prices on the shelves to the price in the database.
